

Package: arkhe (via r-universe)

August 28, 2024

Title Tools for Cleaning Rectangular Data

Version 1.7.0

Maintainer Nicolas Frerebeau

<nicolas.frerebeau@u-bordeaux-montaigne.fr>

Description A dependency-free collection of simple functions for cleaning rectangular data. This package allows to detect, count and replace values or discard rows/columns using a predicate function. In addition, it provides tools to check conditions and return informative error messages.

append	<i>Convert Row Names to an Explicit Column</i>
--------	--

Description

Convert Row Names to an Explicit Column

Usage

```
append_rownames(x, ...)  
  
## S4 method for signature 'data.frame'  
append_rownames(x, after = 0, remove = TRUE, var = "rownames")
```

Arguments

- x

A [data.frame](#).
- ...

Currently not used.
- after

A length-one [numeric](#) vector specifying a subscript, after which the row names are to be appended.
- remove

A [logical](#) scalar: should the row names be removed?
- var

A [character](#) string giving the name of column to use for row names.

Value

A [data.frame](#).

Author(s)

N. Frerebeau

Other data preparation tools: [assign\(\)](#), [compact\(\)](#), [count\(\)](#), [detect\(\)](#), [discard\(\)](#), [get\(\)](#), [keep\(\)](#), [seek\(\)](#)

Examples

```
X <- data.frame(
  x = 1:5,
  y = 6:10,
  z = LETTERS[1:5]
)

## Assign column to row names
(Y <- assign_rownames(X, 3))

## Append row names to data.frame
(Z <- append_rownames(Y))
```

assert_constant	<i>Check Numeric Trend</i>
-----------------	----------------------------

Description

Check Numeric Trend

Usage

```
assert_constant(x, ...)

assert_decreasing(x, ...)

assert_increasing(x, ...)
```

Arguments

x	A numeric object to be checked.
...	Extra parameters to be passed to internal methods.

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other validation methods: [assert_data](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_names\(\)](#), [assert_numeric](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#), [validate\(\)](#)

`assert_data`*Check Data*

Description

- `assert_missing()` and `assert_infinite()` check if an object contains any missing (NA, NaN) or infinite (Inf) value.
- `assert_unique()` checks if an object contains duplicated elements.

Usage`assert_missing(x)``assert_infinite(x)``assert_unique(x)`**Arguments**

`x` An object to be checked.

Value

Throws an error, if any, and returns `x` invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other validation methods: [assert_constant\(\)](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_names\(\)](#), [assert_numeric](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#), [validate\(\)](#)

`assert_length`*Check Object Length/Dimensions*

Description

Check Object Length/Dimensions

Usage

```
assert_length(x, expected, empty = FALSE)
```

```
assert_lengths(x, expected)
```

```
assert_empty(x)
```

```
assert_filled(x)
```

```
assert_dimensions(x, expected)
```

Arguments

x	An object to be checked.
expected	An appropriate expected value.
empty	A logical scalar: should empty objects be ignored?

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other validation methods: [assert_constant\(\)](#), [assert_data](#), [assert_lower\(\)](#), [assert_names\(\)](#), [assert_numeric](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#), [validate\(\)](#)

assert_lower

Check Numeric Relations

Description

Check Numeric Relations

Usage

```
assert_lower(x, y, ...)
```

```
assert_greater(x, y, ...)
```

Arguments

x, y	A numeric object to be checked.
...	Extra parameters to be passed to internal methods.

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other validation methods: [assert_constant\(\)](#), [assert_data](#), [assert_length\(\)](#), [assert_names\(\)](#), [assert_numeric](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#), [validate\(\)](#)

assert_names

Check Object Names

Description

Check Object Names

Usage

```
assert_names(x, expected)
```

```
assert_dimnames(x, expected)
```

```
assert_rownames(x, expected)
```

```
assert_colnames(x, expected)
```

Arguments

x An object to be checked.

expected An appropriate expected value.

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other validation methods: [assert_constant\(\)](#), [assert_data](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_numeric](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#), [validate\(\)](#)

assert_numeric	<i>Check Numeric Values</i>
----------------	-----------------------------

Description

Check Numeric Values

Usage

```
assert_count(x, na.rm = FALSE, ...)  
assert_whole(x, na.rm = FALSE, ...)  
assert_positive(x, na.rm = FALSE, ...)  
assert_negative(x, na.rm = FALSE, ...)  
assert_odd(x, na.rm = FALSE, ...)  
assert_even(x, na.rm = FALSE, ...)
```

Arguments

x	A numeric object to be checked.
na.rm	A logical scalar: should missing values (including NaN) be omitted?
...	Extra parameters to be passed to internal methods.

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other validation methods: [assert_constant\(\)](#), [assert_data](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_names\(\)](#), [assert_package\(\)](#), [assert_square\(\)](#), [assert_type\(\)](#), [validate\(\)](#)

assert_package	<i>Check the Availability of a Package</i>
----------------	--

Description

Check the Availability of a Package

Usage

```
assert_package(x, ask = TRUE)
```

```
needs(x, ask = TRUE)
```

Arguments

x	A character vector naming the packages to check.
ask	A logical scalar: should the user be asked to select packages before they are downloaded and installed?

Details

`assert_package()` is designed for use inside other functions in your own package to check for the availability of a suggested package.

If the required packages are not available and R is running interactively, the user will be asked to install the packages.

`needs()` is an alias for `assert_package()`.

Value

Invisibly returns `NULL`.

Author(s)

N. Frerebeau

Other validation methods: [assert_constant\(\)](#), [assert_data](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_names\(\)](#), [assert_numeric](#), [assert_square\(\)](#), [assert_type\(\)](#), [validate\(\)](#)

assert_square	<i>Check Matrix</i>
---------------	---------------------

Description

Check Matrix

Usage

```
assert_square(x)
```

```
assert_symmetric(x)
```

Arguments

x A [matrix](#) to be checked.

Value

Throw an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other validation methods: [assert_constant\(\)](#), [assert_data](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_names\(\)](#), [assert_numeric](#), [assert_package\(\)](#), [assert_type\(\)](#), [validate\(\)](#)

assert_type	<i>Check Data Types</i>
-------------	-------------------------

Description

Check Data Types

Usage

```
assert_type(x, expected)
```

```
assert_scalar(x, expected)
```

```
assert_function(x)
```

Arguments

x	An object to be checked.
expected	A character string specifying the expected type. It must be one of "list", "atomic", "vector", "numeric", "integer", "double", "character" or "logical".

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

Other validation methods: [assert_constant\(\)](#), [assert_data](#), [assert_length\(\)](#), [assert_lower\(\)](#), [assert_names\(\)](#), [assert_numeric](#), [assert_package\(\)](#), [assert_square\(\)](#), [validate\(\)](#)

 assign

Assign a Specific Row/Column to the Column/Row Names

Description

Assign a Specific Row/Column to the Column/Row Names

Usage

```
assign_colnames(x, ...)

assign_rownames(x, ...)

## S4 method for signature 'data.frame'
assign_rownames(x, column, remove = TRUE)

## S4 method for signature 'data.frame'
assign_colnames(x, row, remove = TRUE)
```

Arguments

x	A data.frame .
...	Currently not used.
column	A length-one numeric vector specifying the column number that is to become the row names.
remove	A logical scalar: should the specified row/column be removed after making it the column/row names?
row	A length-one numeric vector specifying the row number that is to become the column names.

Value

A `data.frame`.

Author(s)

N. Frerebeau

See Also

Other data preparation tools: `append()`, `compact()`, `count()`, `detect()`, `discard()`, `get()`, `keep()`, `seek()`

Examples

```
X <- data.frame(
  x = 1:5,
  y = 6:10,
  z = LETTERS[1:5]
)

## Assign column to row names
(Y <- assign_rownames(X, 3))

## Append row names to data.frame
(Z <- append_rownames(Y))
```

bootstrap

Bootstrap Estimation

Description

Samples randomly from the elements of object with replacement.

Usage

```
bootstrap(object, ...)

## S4 method for signature 'numeric'
bootstrap(object, do, n, ..., f = NULL)
```

Arguments

object	A <code>numeric</code> vector.
...	Extra arguments to be passed to do.
do	A <code>function</code> that takes object as an argument and returns a single numeric value.
n	A non-negative <code>integer</code> giving the number of bootstrap replications.
f	A <code>function</code> that takes a single numeric vector (the result of do) as argument.

Value

If `f` is `NULL` (the default), `bootstrap()` returns a named numeric vector with the following elements:

`original` The observed value of `do` applied to object.

`mean` The bootstrap estimate of mean of `do`.

`bias` The bootstrap estimate of bias of `do`.

`error` the bootstrap estimate of standard error of `do`.

If `f` is a function, `bootstrap()` returns the result of `f` applied to the `n` values of `do`.

Author(s)

N. Frerebeau

See Also

Other resampling methods: [jackknife\(\)](#)

Examples

```
x <- rnorm(20)

## Bootstrap
bootstrap(x, do = mean, n = 100)

## Estimate the 25th and 95th percentiles
quant <- function(x) { quantile(x, probs = c(0.25, 0.75)) }
bootstrap(x, n = 100, do = mean, f = quant)

## Get the n bootstrap values
bootstrap(x, n = 100, do = mean, f = function(x) { x })

## Jackknife
jackknife(x, do = mean) # Sample mean

## Get the leave-one-out values instead of summary
jackknife(x, do = mean, f = function(x) { x })
```

clean_whitespace

Remove Leading/Trailing Whitespace

Description

Remove Leading/Trailing Whitespace

Usage

```
clean_whitespace(x, ...)

## S4 method for signature 'data.frame'
clean_whitespace(x, which = c("both", "left", "right"), squish = TRUE)

## S4 method for signature 'matrix'
clean_whitespace(x, which = c("both", "left", "right"), squish = TRUE)
```

Arguments

<code>x</code>	An R object (should be a matrix or a data.frame).
<code>...</code>	Currently not used.
<code>which</code>	A character string specifying whether to remove both leading and trailing whitespace (default), or only leading ("left") or trailing ("right").
<code>squish</code>	A logical scalar: should all internal whitespace be replaced with a single space?

Author(s)

N. Frerebeau

See Also

[trimws\(\)](#)

Other data cleaning tools: [remove_Inf\(\)](#), [remove_NA\(\)](#), [remove_constant\(\)](#), [remove_empty\(\)](#), [remove_zero\(\)](#), [replace_Inf\(\)](#), [replace_NA\(\)](#), [replace_empty\(\)](#), [replace_zero\(\)](#)

Examples

```
x <- data.frame(
  A = c(" Both ", " Left", "Right "),
  B = 1:3
)

clean_whitespace(x, which = "both")
clean_whitespace(x, which = "left")
clean_whitespace(x, which = "right")
```

compact

Remove Empty Rows/Columns

Description

Removes empty rows/columns in an array-like object.

Usage

```
compact(x, ...)

compact_cols(x, ...)

compact_rows(x, ...)

## S4 method for signature 'ANY'
compact(x, margin = 1, na.rm = FALSE, verbose = getOption("arkhe.verbose"))

## S4 method for signature 'ANY'
compact_cols(x, na.rm = FALSE, verbose = getOption("arkhe.verbose"))

## S4 method for signature 'ANY'
compact_rows(x, na.rm = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
na.rm	A logical scalar: should NA values be stripped before the computation proceeds?
verbose	A logical scalar: should R report extra information on progress?

Details

A row/column is empty if it contains only zeros (if of type `numeric`) or zero length character strings (if of type `character`).

Author(s)

N. Frerebeau

See Also

Other data preparation tools: [append\(\)](#), [assign\(\)](#), [count\(\)](#), [detect\(\)](#), [discard\(\)](#), [get\(\)](#), [keep\(\)](#), [seek\(\)](#)

Examples

```
## Create a data.frame
X <- data.frame(A = 0, B = 1:5, C = 6, D = "", F = letters[1:5])
X

## Remove empty columns
compact(X, margin = 2)
```

concat	<i>Concatenate</i>
--------	--------------------

Description

Concatenates character vectors.

Usage

```
x %+% y
```

Arguments

x, y A [character](#) vector.

Value

A [character](#) vector.

See Also

Other utilities: [null](#)

confidence_binomial	<i>Confidence Interval for Binomial Proportions</i>
---------------------	---

Description

Computes a Wald interval for a proportion at a desired level of significance.

Usage

```
confidence_binomial(object, ...)

## S4 method for signature 'numeric'
confidence_binomial(
  object,
  n,
  level = 0.95,
  method = "wald",
  corrected = FALSE
)
```

Arguments

object	A numeric vector giving the number of success.
...	Currently not used.
n	A length-one numeric vector giving the number of trials.
level	A length-one numeric vector giving the confidence level. Must be a single number between 0 and 1.
method	A character string specifying the method to be used. Any unambiguous sub-string can be used.
corrected	A logical scalar: should continuity correction be used? Only used if method is "wald".

Value

A length-two **numeric** vector giving the lower and upper confidence limits.

Author(s)

N. Frerebeau

See Also

Other summary statistics: [confidence_mean\(\)](#), [confidence_multinomial\(\)](#), [interval_credible\(\)](#), [interval_hdr\(\)](#)

Examples

```
## Confidence interval for a mean
x <- seq(from = -4, to = 4, by = 0.01)
y <- dnorm(x)

confidence_mean(y, type = "student")
confidence_mean(y, type = "normal")

## Confidence interval for a propotion
confidence_binomial(118, n = 236)

x <- c(35, 74, 22, 69)
confidence_multinomial(x)
```

confidence_mean

Confidence Interval for a Mean

Description

Computes a confidence interval for a mean at a desired level of significance.

Usage

```
confidence_mean(object, ...)  
  
## S4 method for signature 'numeric'  
confidence_mean(object, level = 0.95, type = c("student", "normal"))
```

Arguments

object	A numeric vector.
...	Currently not used.
level	A length-one numeric vector giving the confidence level. Must be a single number between 0 and 1.
type	A character string giving the type of confidence interval to be returned. It must be one "student" (the default) or "normal". Any unambiguous substring can be given.

Value

A length-two **numeric** vector giving the lower and upper confidence limits.

Author(s)

N. Frerebeau

See Also

Other summary statistics: [confidence_binomial\(\)](#), [confidence_multinomial\(\)](#), [interval_credible\(\)](#), [interval_hdr\(\)](#)

Examples

y <- dnorm(x)  
  
confidence_mean(y, type = "student")  
confidence_mean(y, type = "normal")  
  
## Confidence interval for a propotion  
confidence_binomial(118, n = 236)  
  
x <- c(35, 74, 22, 69)  
confidence_multinomial(x)
```

confidence_multinomial

Confidence Interval for Multinomial Proportions

Description

Computes a Wald interval for a proportion at a desired level of significance.

Usage

```
confidence_multinomial(object, ...)

## S4 method for signature 'numeric'
confidence_multinomial(
  object,
  level = 0.95,
  method = "wald",
  corrected = FALSE
)
```

Arguments

object	A numeric vector of positive integers giving the number of occurrences of each class.
...	Currently not used.
level	A length-one numeric vector giving the confidence level. Must be a single number between 0 and 1.
method	A character string specifying the method to be used. Any unambiguous sub-string can be used.
corrected	A logical scalar: should continuity correction be used? Only used if method is "wald".

Value

A two column [numeric](#) matrix giving the lower and upper confidence limits.

Author(s)

N. Frerebeau

See Also

x <- seq(from = -4, to = 4, by = 0.01)
y <- dnorm(x)

confidence_mean(y, type = "student")
confidence_mean(y, type = "normal")

## Confidence interval for a propotion
confidence_binomial(118, n = 236)

x <- c(35, 74, 22, 69)
confidence_multinomial(x)
```

count	<i>Count Values Using a Predicate</i>
-------	---------------------------------------

Description

Counts values by rows/columns using a predicate function.

Usage

```
count(x, ...)
```

```
## S4 method for signature 'data.frame'
count(x, f, margin = 1, negate = FALSE, na.rm = FALSE, ...)
```

```
## S4 method for signature 'matrix'
count(x, f, margin = 1, negate = FALSE, na.rm = FALSE, ...)
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Further arguments to be passed to f.
f	A predicate function .
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
negate	A logical scalar: should the negation of f be used instead of f?
na.rm	A logical scalar: should NA values be stripped before the computation proceeds?

Value

A [numeric](#) vector.

Author(s)

N. Frerebeau

See Also

Other data preparation tools: [append\(\)](#), [assign\(\)](#), [compact\(\)](#), [detect\(\)](#), [discard\(\)](#), [get\(\)](#), [keep\(\)](#), [seek\(\)](#)

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)

## Add NA
k <- sample(1:25, 3, FALSE)
X[k] <- NA
X

## Count missing values in rows
count(X, f = is.na, margin = 1)
## Count non-missing values in columns
count(X, f = is.na, margin = 2, negate = TRUE)
```

describe

Data Description

Description

Describes an object.

Usage

```
describe(x, ...)
```

S4 method for signature 'ANY'

```
describe(x)
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.

Value

`describe()` is called for its side-effects. Invisibly returns x.

Author(s)

N. Frerebeau

See Also

Other data summaries: [sparsity\(\)](#)

Examples

```
## Create a data matrix
X <- matrix(sample(0:9, 15, TRUE), nrow = 3, ncol = 5)

## Add NA
k <- sample(1:15, 3, FALSE)
X[k] <- NA

## Sparsity
sparsity(X)

## Quick description
describe(X)
```

detect

Find Rows/Columns Using a Predicate

Description

Finds rows/columns in an array-like object using a predicate function.

Usage

```
detect(x, ...)

## S4 method for signature 'ANY'
detect(x, f, margin = 1, negate = FALSE, all = FALSE, na.rm = FALSE, ...)
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Further arguments to be passed to f.
f	A predicate function .
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
negate	A logical scalar: should the negation of f be used instead of f?
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.
na.rm	A logical scalar: should NA values be stripped before the computation proceeds?

Value

A [logical](#) vector.

Author(s)

N. Frerebeau

See Also

Other data preparation tools: [append\(\)](#), [assign\(\)](#), [compact\(\)](#), [count\(\)](#), [discard\(\)](#), [get\(\)](#), [keep\(\)](#), [seek\(\)](#)

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)

## Add NA
k <- sample(1:25, 3, FALSE)
X[k] <- NA
X

## Find row with NA
detect(X, f = is.na, margin = 1)
## Find column without any NA
detect(X, f = is.na, margin = 2, negate = TRUE, all = TRUE)
```

discard

Remove Rows/Columns Using a Predicate

Description

Removes rows/columns in an array-like object using a predicate function.

Usage

```
discard(x, ...)

discard_cols(x, ...)

discard_rows(x, ...)

## S4 method for signature 'ANY'
discard(
  x,
  f,
  margin = 1,
  negate = FALSE,
```

```

    all = FALSE,
    na.rm = FALSE,
    verbose = getOption("arkhe.verbose"),
    ...
)

## S4 method for signature 'ANY'
discard_rows(
  x,
  f,
  negate = FALSE,
  all = FALSE,
  na.rm = FALSE,
  verbose = getOption("arkhe.verbose"),
  ...
)

## S4 method for signature 'ANY'
discard_cols(
  x,
  f,
  negate = FALSE,
  all = FALSE,
  na.rm = FALSE,
  verbose = getOption("arkhe.verbose"),
  ...
)

```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Further arguments to be passed to f.
f	A predicate function .
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
negate	A logical scalar: should the negation of f be used instead of f?
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.
na.rm	A logical scalar: should NA values be stripped before the computation proceeds?
verbose	A logical scalar: should R report extra information on progress?

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)

## Add NA
k <- sample(1:25, 3, FALSE)
X[k] <- NA
X

## Remove row with any NA
discard(X, f = is.na, margin = 1, all = FALSE)
## Remove column with any NA
discard(X, f = is.na, margin = 2, all = FALSE)
```

get

*Get Rows/Columns by Name***Description**

Returns rows/columns selected by name in an array-like object.

Usage

```
get_columns(x, ...)

get_rows(x, ...)

## S4 method for signature 'data.frame'
get_columns(x, select = NULL, ...)

## S4 method for signature 'data.frame'
get_rows(x, select = NULL, ...)
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Further arguments to be passed to select.
select	A function to be applied to the row/column names (e.g. startsWith()). Must return a single integer or logical vector.

Value

An object of the same sort as x.

Examples

```
## Seek columns
seek_columns(iris, select = startsWith, prefix = "Sepal")

## Get columns
x <- get_columns(iris, select = startsWith, prefix = "Sepal")
head(x)
```

interval_credible	<i>Bayesian Credible Interval</i>
-------------------	-----------------------------------

Description

Computes the shortest credible interval within which an unobserved parameter value falls with a particular probability.

Usage

```
interval_credible(x, ...)

## S4 method for signature 'numeric'
interval_credible(x, level = 0.95)
```

Arguments

x	A numeric vector.
...	Currently not used.
level	A length-one numeric vector giving the confidence level.

Value

A three-columns numeric [matrix](#) giving the lower and upper boundaries of the credible interval and associated probability.

```

interval_hdr	<i>Highest Density Regions</i>
--------------	--------------------------------

Description

Highest Density Regions

Usage

```
interval_hdr(x, y, ...)

## S4 method for signature 'numeric,numeric'
interval_hdr(x, y, level = 0.954)

## S4 method for signature 'numeric,missing'
interval_hdr(x, level = 0.954, ...)
```

Arguments

x	A numeric vector giving the coordinates of the points where the density is estimated.
y	A numeric vector giving the estimated density values. If y is missing and x is a numeric vector, density estimates will be computed from x.
...	Further arguments to be passed to stats::density() .
level	A length-one numeric vector giving the confidence level.

Value

A three-columns numeric [matrix](#) giving the lower and upper boundaries of the HPD interval and associated probabilities.

is_scalar	<i>Scalar Type Predicates</i>
-----------	-------------------------------

Description

Scalar Type Predicates

Usage

```
is_scalar_list(x)
is_scalar_atomic(x)
is_scalar_vector(x)
is_scalar_numeric(x)
is_scalar_integer(x)
is_scalar_double(x)
is_scalar_character(x)
is_scalar_logical(x)
```

Arguments

x An object to be tested.

Value

A [logical](#) scalar.

See Also

Other predicates: [predicate-matrix](#), [predicate-numeric](#), [predicate-trend](#), [predicate-type](#), [predicate-utils](#)

jackknife*Jackknife Estimation*

Description

Jackknife Estimation

Usage

```
jackknife(object, ...)
```

```
## S4 method for signature 'numeric'  
jackknife(object, do, ..., f = NULL)
```

Arguments

object	A numeric vector.
...	Extra arguments to be passed to do.
do	A function that takes object as an argument and returns a single numeric value.
f	A function that takes a single numeric vector (the leave-one-out values of do) as argument.

Value

If f is NULL (the default), jackknife() returns a named numeric vector with the following elements:

original The observed value of do applied to object.

mean The jackknife estimate of mean of do.

bias The jackknife estimate of bias of do.

error The jackknife estimate of standard error of do.

If f is a function, jackknife() returns the result of f applied to the leave-one-out values of do.

Author(s)

N. Frerebeau

See Also

Other resampling methods: [bootstrap\(\)](#)

Examples

```

x <- rnorm(20)

## Bootstrap
bootstrap(x, do = mean, n = 100)

## Estimate the 25th and 95th percentiles
quant <- function(x) { quantile(x, probs = c(0.25, 0.75)) }
bootstrap(x, n = 100, do = mean, f = quant)

## Get the n bootstrap values
bootstrap(x, n = 100, do = mean, f = function(x) { x })

## Jackknife
jackknife(x, do = mean) # Sample mean

## Get the leave-one-out values instead of summary
jackknife(x, do = mean, f = function(x) { x })

```

keep	<i>Keep Rows/Columns Using a Predicate</i>
------	--

Description

Keeps rows/columns in an array-like object using a predicate function.

Usage

```

keep(x, ...)

keep_cols(x, ...)

keep_rows(x, ...)

## S4 method for signature 'ANY'
keep(
  x,
  f,
  margin = 1,
  negate = FALSE,
  all = FALSE,
  na.rm = FALSE,
  verbose = getOption("arkhe.verbose"),
  ...
)

## S4 method for signature 'ANY'
keep_rows(

```

```

    x,
    f,
    negate = FALSE,
    all = FALSE,
    na.rm = FALSE,
    verbose = getOption("arkhe.verbose"),
    ...
)

## S4 method for signature 'ANY'
keep_cols(
  x,
  f,
  negate = FALSE,
  all = FALSE,
  na.rm = FALSE,
  verbose = getOption("arkhe.verbose"),
  ...
)

```

Arguments

<code>x</code>	An R object (should be a matrix or a data.frame).
<code>...</code>	Further arguments to be passed to <code>f</code> .
<code>f</code>	A predicate function .
<code>margin</code>	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
<code>negate</code>	A logical scalar: should the negation of <code>f</code> be used instead of <code>f</code> ?
<code>all</code>	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by <code>f</code> are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by <code>f</code> are considered.
<code>na.rm</code>	A logical scalar: should NA values be stripped before the computation proceeds?
<code>verbose</code>	A logical scalar: should R report extra information on progress?

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)

## Add NA
k <- sample(1:25, 3, FALSE)
X[k] <- NA
X

## Keep row without any NA
keep(X, f = is.na, margin = 1, negate = TRUE, all = TRUE)
## Keep row without any NA
keep(X, f = is.na, margin = 2, negate = TRUE, all = TRUE)
```

math_gcd

Greatest Common Divisor

Description

Computes the greatest common divisor (GCD) of two integer using the Euclidean algorithm.

Usage

```
math_gcd(x, y)

## S4 method for signature 'numeric,numeric'
math_gcd(x, y)
```

Arguments

x, y A [numeric](#) vector.

Value

A [numeric](#) vector.

Author(s)

N. Frerebeau

See Also

Other mathematic functions: [math_lcm\(\)](#)

math_lcm	<i>Least Common Multiple</i>
----------	------------------------------

Description

Computes the lowest common multiple of the denominators of a set of fractions.

Usage

```
math_lcm(x, y)

## S4 method for signature 'numeric,numeric'
math_lcm(x, y)
```

Arguments

x, y A [numeric](#) vector.

Value

A [numeric](#) vector.

Author(s)

N. Frerebeau

See Also

Other mathematic functions: [math_gcd\(\)](#)

null	<i>Default value for NULL</i>
------	-------------------------------

Description

Replaces NULL with a default value.

Usage

```
x %||% y
```

Arguments

x, y An object.

Value

If `x` is NULL, returns `y`; otherwise returns `x`.

See Also

Other utilities: [concat](#)

predicate-matrix	<i>Matrix Predicates</i>
------------------	--------------------------

Description

- `is_square()` checks if a matrix is square.
- `is_symmetric()` checks if a matrix is symmetric.

Usage

```
is_square(x)
```

```
is_symmetric(x)
```

Arguments

`x` A [matrix](#) to be tested.

Value

A [logical](#) scalar.

See Also

Other predicates: [is_scalar](#), [predicate-numeric](#), [predicate-trend](#), [predicate-type](#), [predicate-utils](#)

predicate-numeric	<i>Numeric Predicates</i>
-------------------	---------------------------

Description

Check numeric objects:

- `is_zero()` checks if an object contains only zeros.
- `is_odd()` and `is_even()` check if a number is odd or even, respectively.
- `is_positive()` and `is_negative` check if an object contains only (strictly) positive or negative numbers.
- `is_whole()` checks if an object only contains whole numbers.

Usage

```
is_zero(x, tolerance = sqrt(.Machine$double.eps), ...)

is_odd(x, ...)

is_even(x, ...)

is_positive(x, strict = FALSE, ...)

is_negative(x, strict = FALSE, ...)

is_whole(x, tolerance = sqrt(.Machine$double.eps), ...)
```

Arguments

x	A numeric object to be tested.
tolerance	A numeric scalar giving the tolerance to check within.
...	Currently not used.
strict	A logical scalar: should strict inequality be used?

Value

A [logical](#) vector.

See Also

Other predicates: [is_scalar](#), [predicate-matrix](#), [predicate-trend](#), [predicate-type](#), [predicate-utils](#)

predicate-trend	<i>Numeric Trend Predicates</i>
-----------------	---------------------------------

Description

Check numeric objects:

- `is_constant()` checks for equality among all elements of a vector.
- `is_increasing()` and `is_decreasing()` check if a sequence of numbers is monotonically increasing or decreasing, respectively.

Usage

```
is_constant(x, tolerance = sqrt(.Machine$double.eps), na.rm = FALSE)

is_increasing(x, na.rm = FALSE)

is_decreasing(x, na.rm = FALSE)
```

```
is_greater(x, y, strict = FALSE, na.rm = FALSE)

is_lower(x, y, strict = FALSE, na.rm = FALSE)
```

Arguments

- x, y A [numeric](#) object to be tested.
- tolerance A [numeric](#) scalar giving the tolerance to check within.
- na.rm A [logical](#) scalar: should missing values (including NaN) be omitted?
- strict A [logical](#) scalar: should strict inequality be used?

Value

A [logical](#) scalar.

See Also

Other predicates: [is_scalar](#), [predicate-matrix](#), [predicate-numeric](#), [predicate-type](#), [predicate-utils](#)

predicate-type	<i>Type Predicates</i>
----------------	------------------------

Description

Type Predicates

Usage

```
is_list(x)

is_atomic(x)

is_vector(x)

is_numeric(x)

is_integer(x)

is_double(x)

is_character(x)

is_logical(x)

is_error(x)
```

```
is_warning(x)
```

```
is_message(x)
```

Arguments

x An object to be tested.

Value

A [logical](#) scalar.

See Also

Other predicates: [is_scalar](#), [predicate-matrix](#), [predicate-numeric](#), [predicate-trend](#), [predicate-utils](#)

predicate-utils	<i>Utility Predicates</i>
-----------------	---------------------------

Description

- `is_empty()` checks if an object is empty (any zero-length dimensions).
- `has_length()` checks how long is an object.
- `has_names()` checks if an object is named.
- `has_duplicates()` checks if an object has duplicated elements.
- `has_missing()` and `has_infinite()` check if an object contains missing or infinite values.

Usage

```
has_length(x, n = NULL)
```

```
is_empty(x)
```

```
has_names(x, names = NULL)
```

```
has_missing(x)
```

```
has_infinite(x)
```

```
is_unique(x, tolerance = sqrt(.Machine$double.eps), na.rm = FALSE)
```

```
has_duplicates(x)
```

Arguments

x	A vector to be tested.
n	A length-one numeric vector specifying the length to test x with. If NULL, returns TRUE if x has length greater than zero, and FALSE otherwise.
names	A character vector specifying the names to test x with. If NULL, returns TRUE if x has names, and FALSE otherwise.
tolerance	A numeric scalar giving the tolerance to check within (for numeric vector).
na.rm	A logical scalar: should missing values (including NaN) be omitted?

Value

A [logical](#) scalar.

See Also

Other predicates: [is_scalar](#), [predicate-matrix](#), [predicate-numeric](#), [predicate-trend](#), [predicate-type](#)

remove_constant	<i>Remove Constant Columns</i>
-----------------	--------------------------------

Description

Remove Constant Columns

Usage

```
remove_constant(x, ...)

## S4 method for signature 'ANY'
remove_constant(x, na.rm = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.
na.rm	A logical scalar: should NA values be stripped before the computation proceeds?
verbose	A logical scalar: should R report extra information on progress?

Author(s)

N. Frerebeau

Examples

```
## Create a data.frame
X <- data.frame(A = 1, B = 1:3)
X

remove_constant(X)

## Add NA
X[1, 1] <- NA
remove_constant(X)
remove_constant(X, na.rm = TRUE)
```

remove_empty	<i>Remove Rows/Columns with Empty String</i>
--------------	--

Description

Removes rows/columns that contain empty strings.

Usage

```
remove_empty(x, ...)

## S4 method for signature 'ANY'
remove_empty(x, margin = 1, all = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.
verbose	A logical scalar: should R report extra information on progress?

Examples

```
## Create a data matrix
X <- matrix(sample(LETTERS, 25, TRUE), nrow = 5, ncol = 5)

## Add empty string
k <- sample(1:25, 3, FALSE)
X[k] <- ""
X

## Remove rows with empty strings
remove_empty(X, margin = 1)

## Replace empty strings
replace_empty(X, value = "XXX")
```

remove_Inf

*Remove Rows/Columns with Infinite Values***Description**

Removes rows/columns that contain [infinite values](#).

Usage

```
remove_Inf(x, ...)

## S4 method for signature 'ANY'
remove_Inf(x, margin = 1, all = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.
verbose	A logical scalar: should R report extra information on progress?

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)

## Add Inf
k <- sample(1:25, 3, FALSE)
X[k] <- Inf
X

## Remove rows with Inf
remove_Inf(X, margin = 1)

## Replace Inf with zeros
replace_Inf(X, value = 0)
```

remove_NA

*Remove Rows/Columns with Missing Values***Description**

Removes rows/columns that contain [missing values](#).

Usage

```
remove_NA(x, ...)

## S4 method for signature 'ANY'
remove_NA(x, margin = 1, all = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.

scale_midpoint	<i>Rescale Continuous Vector (minimum, midpoint, maximum)</i>
----------------	---

Description

Rescales continuous vector to have specified minimum, midpoint and maximum.

Usage

```
scale_midpoint(x, to = c(0, 1), from = range(x, finite = TRUE), midpoint = 0)
```

Arguments

x	A numeric vector.
to	A length-two numeric vector specifying the output range.
from	A length-two numeric vector specifying the input range.
midpoint	A length-one numeric vector specifying the mid-point of input range.

Value

A [numeric](#) vector.

Note

For internal use only.

seek	<i>Search Rows/Columns by Name</i>
------	------------------------------------

Description

Searches rows/columns by name in an array-like object.

Usage

```
seek_columns(x, ...)

seek_rows(x, ...)

## S4 method for signature 'data.frame'
seek_rows(x, select = NULL, ...)

## S4 method for signature 'data.frame'
seek_columns(x, select = NULL, ...)
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Further arguments to be passed to select.
select	A function to be applied to the row/column names (e.g. startsWith()). Must return a single integer or logical vector.

Value

An [integer](#) vector or NULL.

Author(s)

N. Frerebeau

Other data preparation tools: [append\(\)](#), [assign\(\)](#), [compact\(\)](#), [count\(\)](#), [detect\(\)](#), [discard\(\)](#), [get\(\)](#), [keep\(\)](#)

Examples

```
## Seek columns
seek_columns(iris, select = startsWith, prefix = "Sepal")

## Get columns
x <- get_columns(iris, select = startsWith, prefix = "Sepal")
head(x)
```

sparsity

Sparsity

Description

Computes data sparsity (proportion of zeros).

Usage

```
sparsity(x, ...)
```

S4 method for signature 'matrix'

```
sparsity(x, count = FALSE)
```

S4 method for signature 'data.frame'

```
sparsity(x, count = FALSE)
```

Arguments

x	An R object (should be a matrix or a data.frame).
...	Currently not used.
count	A logical scalar: should a count be returned instead of a proportion?

Details

If x is a `data.frame`, sparsity is computed on numeric variables only.

Value

A length-one [numeric](#) vector.

Author(s)

N. Frerebeau

See Also

Other data summaries: [describe\(\)](#)

Examples

```
## Create a data matrix
X <- matrix(sample(0:9, 15, TRUE), nrow = 3, ncol = 5)

## Add NA
k <- sample(1:15, 3, FALSE)
X[k] <- NA

## Sparsity
sparsity(X)

## Quick description
describe(X)
```

validate

Validate a Condition

Description

Validate a Condition

Usage

```
validate(expr)
```

Arguments

`expr` An object to be evaluated.

Value

Returns NULL on success, otherwise returns the error as a string.

Author(s)

N. Frerebeau
